L.S.D. in Torture & Interrogation, (LSD-001-A)

Portions of the research cited herein, and deployment of these methods may constitute Crimes Against Humanity & Serious Human Rights Offenses.

> *"Once a research animal hits the floor and becomes an escapee, its moral standing is instantly diminished."*[1]

Use of LySergic acid Diethylamide[2] on unwitting subjects has a number of potential effects & complications, as they relate to Torture & Ego-Fragmentation dissociative disorders. These include altering Fixed Behavior Patterns, and use as ego-suppressant drugs.

L.S.D. also acts as an adjudvant to torture while enhancing stimulus intensity,[3] both immediately and long after administration.[4]

It also serves to reduce a Subjects stress-resiliency, and ability to resist interrogation. In some cases it may also serve to make a subject more suggestible. In all cases it acts as a severe stressor.

Covert programs operating until the fall of the Berlin Wall; (and subsequent sea-change in U.S. Federal Policy regarding Cold-War programs,)[5] served to enhance in select cases resiliency and tolerances to L.S.D. for sustained abilities in Command & Control (C2) situations.[6]

They were also researched by M.I. Stein at the Stanford Research Institute in relation to enhancing Creativity in subjects.

It's offensive use is considered an Incapacitating Compound, and Chemical Warfare agent.

L.S.D. may also precipitate mental illness, and serve to reduce credibility of potential witnesses eg., in Government misconduct cases;[7] or act as a policy instrument to repress dissent.[8]

Ultimately the use of Incapacitant Compounds in Counterintelligence & Counterinsurgency

2 (6aR,9R)- N,N- diethyl- 7-methyl- 4,6,6a,7,8,9- hexahydroindolo- [4,3-fg] quinoline- 9-carboxamide ($C_{20}H_{25}N_3O$)
3 Also see: Stress Modeling
4 After-Effects may range from days, to months, and even years leading to permanent alterations in personality & consciousness, depending on a variety of factors; with the most immediate intensity ranging from onset within 1-2 hours, and peak effects within 4-8 hours, gradually diminishing over a 24-48 hour period. *(See medical literature.)*

operations, as a matter of Psychological & Unconventional Warfare[9] serves to reduce the operational capacity of the subject, and their subsequent will to fight / [resist]. I.C.'s are considered to be 'less than lethal' measures, however their use constitutes inhumane treatment, and is in violation of International Law & Human Rights standards.

Below is a sample listing of authors of U.S. Patents as they relate to use of L.S.D. in Torture (under color,) whom have ties to the United States Intelligence Community[10], eg.:

1. *United States Patent Application 20210236523, SCHINDLER; Emmanuelle; et al. August 5, 2021, PSYCHEDELIC TREATMENT FOR HEADACHE DISORDERS, YALE UNIVERSITY, The United States of America as represented by the Department of Veterans Affairs;*

2. *United States Patent Application 20200397752, Perez Castillo; Ana Maria; et al. December 24, 2020, COMBINATION PRODUCT FOR THE TREATMENT OF NEUROLOGICAL AND/OR PSYCHIATRIC DISORDERS;*

3. *United States Patent Application 20210183519, RAZ; Shlomi; et al. June 17, 2021, METHODS AND SYSTEMS FOR ENHANCING SAFETY OF PSYCHEDELIC DRUG THERAPIES*
   a. *"...determining a measure of risk, wherein the measure of risk correlates with a risk of precipitating or exacerbating psychosis, hypomania, or mania in the candidate."*[11]

4. *CIK (Filer ID Number) [SEC] 0001599453, Eleusis Benefit Corporation, PBC, DELAWARE.*

L.S.D. & non-endogenous, artificially induced *Schizophrenia:*
(W.H. Gantt 1944, dissociative, depersonalizing, and ego-fragmentation disorders)

Contrary to common belief, "Schizophrenia," and schizophrenic reactions are not endogenous, which is to say not inherent disorders, to the patient; nor do they have biological origins.

These beliefs have been perpetuated since the late 1800's, before the advent of Freudian psychology, by a German named Emil Kraepelin,[12] and are still widely taught in American schools today; and certified by the American Psychiatric Association.

(Kraepelin's book was banned by the U.S. Government for nearly twenty years, by the U.S. War Department.)

These ideological philosophies have their roots in Euro-Supremacism and genetic superiority theory; which fueled the rise of Hitler and the German NAZI party.

There are politically motivated reasons why these racial superiority theories are still perpetrated

today, by those within both the American, Canadian, and British Medical Community; as well as perpetuated within the U.S. Government & U.S. Intelligence Community.

This misinformation constitutes a form of Military Deception. It is a means to an end, in that it gives plausible deniability to slander opponents and critics of the U.S. Government.[13]

Things changed in the United States in 1942 with the creation of the Joint Psychological Operations Board which would later become the Central Intelligence Agency. This is a partnership between the U.S. Government & British Crown, giving rise to the term "Special Relationship," when discussing diplomatic relations. British Officers still serve aboard U.S. Naval Vessels, and are embedded within both the U.S. Executive branch structure, and other U.S. Intelligence & Department of Defense components.

Under British advice, following the path of the German NAZI party, the United States began social cleansing, (also known as Social Hygiene,) campaigns; which have an ideological psychological underpinning, but a root economic-political purpose.

Many State medical & psychological licensing board for example, will not grant license within the State to any provider who does not satisfactorily confirm to perpetuating & adhering to these racial superiority theories within their practice.[14]

At root, schizophrenia has an etiology of non-endogenous trauma beyond the patients ability to successfully integrate these experiences within their Ego, or conscience self. This process results in a "split-mind" or dissociative state, particularly when confronted with memories of such trauma.

It's psychological warfare purpose uses, in interrogations, and withholding, or concealing information from both interrogators, and the conscience mind of the subject.

Thus, we find the purpose of destroying the ego, in enhanced interrogation practices. Generally however this leaves the subject permanently mentally disabled; whether or not there were sufficient grounds for such a procedure.

There is a spectrum of ego-fragmentation, along which Post-Traumatic Stress Disorder (formerly shell-shock,) lies toward the beginning of the continuum, and toward the end, complete ego-fragmentation. There is also a cumulative effect of such trauma; meaning a single incident doesn't necessarily cause a complete ego-break, but multiple incidents over time, even minor ones may do so.[15]

The science of Stress Modeling measures stimulus intensity over time, psychometrically; and when studied by the Department of Defense is termed Human Factors research.

This research began in 1922, by the British Crown following trauma suffered by WWI soldiers, and continued during WWII by both Allied, and Axis powers. Operation Paperclip made famous the Central Intelligence Agencies ambitions toward recruiting, and bringing these scientists to the United States toward their continued study of these topics.

General Albert Cody Wedemeyer, was one U.S. Military officer who studied in Germany, under the NAZI command, shortly before the United States entered the war; and later became an advocate of [these programs] within the United States.

Today, the American Psychiatric Association[16] perpetuates the myth of biological, or endogenous, racially inferior origins of *'Schizophrenia'* [which is both an outdated, and medically vague term,] to conceal various abuses, by Government entities, to prevent tort-liability.

Essentially, it is officially considered to be a "Pre-Existing Condition," despite there being no scientific basis to support such claims.

L.S.D., often in combination with other malicious procedures, may be used to precipitate mental illness in political dissidents. This is called the Political Abuse of Psychiatry,[17] and the U.S. Congress held hearings on the matter in the 1980's, regarding similar practice in the Soviet Union.

By specifically targeting the ego, a person is reduced to an almost infantile state of mind, lacking the capabilities often of self-awareness, or the corresponding capacities to navigate their environment successfully. This also relates to defense mechanisms inherent within the body, and ability to appreciate, and address threats within the environment; making L.S.D. a very effective Chemical Warfare weapon.

L.S.D. also has the advantage of being extremely potent in small doses, and is as dangerous as gamma radiation. It is also impossible to detect in the blood[18] less than an hour after administration, before the onset of overt intoxication symptoms. Invisible, odorless, colorless, flavorless, and microscopic amounts can cause tremendous, and often permanent damage. It also easily penetrates the skin, and other mucus membranes.

L.S.D. intoxication is not always obvious, even to the subject, particularly concerning what are called threshold doses, generally under 100 micrograms; yet can have significant impairment effects at doses between 10-20 micrograms.

Such intoxication frequently mimic symptoms of a disorganized mental disorder.

Long-term use can cause permanent, disabling brain damage. Even a single exposure will radically, and permanently alter a person's personality.

This also makes L.S.D. a very effective counterintelligence weapon, in disrupting social networks of political enemies.[19]

Any narcotic substance may be used toward these ends, and often are; even when they are distributed at the street level, within communities, with the end-user(s) unknown to the distributor.

18 *Note: Author of this report is not a medical Doctor. Information herein reported from Secondary Sources.*

19 Borgatti, Stephen P. The key player problem. na, 2003.

Thus, L.S.D. can be deployed both overtly, and covertly. When surreptitiously administered, or offered as a party drug, or cure for depression, eg.

The Pupil Dilation Test is preferred method for diagnosing potential L.S.D. intoxication, in a non-clinical setting.

Due to the Doctor Draft[20], and prevalence of Federally Qualified Health Centers, it is difficult if not impossible to obtain objective treatment & assessment of injuries caused by Government Misconduct in the United States, due to disabling conflicts of Medical Personnel, (as U.S. Department of Defense employees.) ICD codes are also lacking where it concerns categories for injuries deliberately caused by torture, which do not have a pre-existing etiological component; particularly ego-fragmentation disorders.[21]

The use of ego-fragmentation toward precipitating creativity (destruction of the self-censorship, response in a healthy person,) were studied by Morris I. Stein (student of H.A. Murray, whom was a student of F. Bartlett,) at the Stanford Research Institute in the 1950's.

  Toxicological Investigations of Drug Facilitated Sexual assaults
  Marc. A. LeBeau

  "drugs that are more difficult to detect cause amnesia, the victims in these cases tend to describe similar experiences they often admit to having had one or more alcoholic drinks with a friend, anyone who has dealt with cases of drug facilitated sexual assault recognizes the difficulties surrounding these investigations, given the amnesiac effect of some of the drugs listed in table 1, victims do not report the crime for days after the alleged drugging, which the victims were not aware that they had been sexually assaulted, showed the assault while they were sedated, given the fact that there is usually a substantial delay between the drugging and the reporting of the crime the urine allows for a longer window of detection of drugs commonly used in these crimes, drug facilitated rape are increasing at an alarming rate”

  "(a) Prohibited Personnel Practices in the Intelligence Comunity- Sec. 1104 of the Nat Sec Act of 1947, 50 USC 3234"

- USDOJ, “Memo for Alberto R. Gonzales: Re: Standards of Conduct for Interrogation under 18 USC 2340-2340A” 1 August 2002

  "controlled substances, we reject this interpretation, for drugs or procedures to rise to the level of disrupting profoundly the sense or personality they must produce an extreme effect and by requiring that they be calculated to produce such an effect the statute requires for liability the defendant has consciously designed the acts to produce such an effect, disruption of the senses or personality alone is insufficient to fall within the scope of this subsection instead that disruption must be profound, the

word profound has a number of meanings...., Similarly we think that the onset of a 'brief psychotic disorder' would satisfy this standard,"

  “Morals and manners change, the historical mystery story writer John Dickson Carr once wrote, but fear is always the same over the ages. The definition of fear and its close relative, anxiety, have varied over time, however, along several dimensions that we will discuss in this chapter. To allow us a starting point in attempting a preliminary definition of these constructs, we shall restrict ourselves to the relatively modern era.”
